

# SikaCor® SW-1000 RepaCor

## ABRASION RESISTANT, INNOVATIVE 2-PACK COATING

### PRODUCT DESCRIPTION

In the cooperative research project "RepaKorr", the project partners drew up the basic material-related, technical, conceptual and organizational principles for an "on-site repair" concept.

With SikaCor® SW-1000 RepaCor, our research department has been successful in establishing a further element of practical Sika products in our on- and offshore portfolio by means of intensive research work:

Abrasion resistant, innovative 2-pack coating for maintenance or repair of (mechanically) damaged coating areas. Corrosion protection for On- and Offshore (wind turbines) or for hydraulic engineering (sluiceways, steel sheet piles etc.) if a simple, high performance and durable repair coating is required.

### PRODUCT BENEFITS

- easy-to-use packaging for difficult repair jobs
- single layer coating
- early water resistance and under water cure
- surface tolerant – can be used on many substrates, even on foreign coatings (except siloxane based coatings)
- corrosion protection at 500 µm, similar to original shop coating
- certified according to ISO 20340
- diffusion resistant
- glass flakes increase coating strength
- impact and abrasion resistant
- color stable like 2 pack-PUR topcoats
- solventfree, 100 % solids, CMR-free
